Ref:

LOG70

LOG® 70

CAPILLARY IRRIGATION SYSTEM

Reservoir of irrigation of 47 l. For large planters

Diameter: 74 cm; Height: 15 cm; Volume: 47 liters

The idea is suitable for vessels from 75 cm in inner diameter to 130 cm.

Alternatively, the 75 x 75 to 120 x 120 cm.

The LOG delivers water and oxygen directly to the plants roots where it is needed most. By installing a LOG tank at the base of your planter the plant can be easily watered but at a much reduced frequency. The LOG tank is easily installed at the base of the planter and then covered with soil ready for planting. The tank is filled through the filler pipe, a float in the filler pipe will tell you when the reservoir is full. The water then travels from the roots upwards for up to 6 weeks without the need for refilling. The system helps your plants establish a healthy root system, which means healthy looking plants.

PLANTER WATER IRRIGATION SYSTEMS

LOG 70 – 47 L

- **Wide range of applications**: Patio display containers; Indoor foliage; Outdoor foliage; Large planters; Remote locations; Shrubs; Window boxes; Hanging baskets
